

Project Logframe Writer: Basic Structure of Project Logical Framework
(Developed by SK Soam for training classes)

Hierarchy of objectives: Vertical Logic and Horizontal Logic

Objective	Project structure	Objectively Verifiable Indicators (OVI)	Means of Verification (MOV)	Critical Assumptions (For failure and success) & Risks
Goal	Step-3 What is the rationality of project?	Step-7 Fill up this column up to output level	Step-7a Fill up this column up to output level	Step-4 If the project objectives (purpose) were achieved would this contribute to solve the constraint, if no Action: Evaluate assumptions, redesign the project
Outcome	Step 2a: Physical deliverables for the society			Step-4a
Purpose	Step-1 What project intend to achieve?			Step-5 If the activities are carried out, would the objectives be achieved, if no Action: Evaluate assumptions, redesign the project
Output	Step 2: Physical deliverables for the project team			Step-6 Are resources sufficient and all are necessary to achieve the outputs? What assumptions out side control of project? Action: Evaluate assumptions, redesign the project
Activities	Step-8 What services/ actions needed to enable clients to achieve their objectives?	Step-10 Optional	Step 10a Optional	Step-9: Optional
Inputs or resource	Step-10 What inputs required to carry out activities and achieve outputs?	Inputs are converted to Monetary terms: Budget
